

Supplementary Table S1. Wording of the different psychoactive drugs included in the analysis in the two surveys.

Psychoactive drug	MSM ^a survey	GPM ^b survey
Cannabis	Cannabis or synthetic cannabinoids (marijuana, hashish, chocolate, joints, grass, synthetic marijuana, spice, K2)	Cannabis, marijuana or hashish (hashish oil, chocolate, pot, cost, grass)
Hallucinogens	LSD (acid, tripis)	Hallucinogens (LSD, acid, tripe, magic mushrooms, ketamine, special-K, ketolar, imalgene)
Cocaine	Powdered or crack cocaine (theme, lighthouse, base, basuco, etc.)	Powder cocaine (cocaine, parakeet, farlop, cocaine hydrochloride) or Basic cocaine (base, cooked cocaine, basuco, bowls, crack, rock)
Amphetamine	Amphetamine (speed)	Amphetamines or speed
Ecstasy	Ecstasy or MDMA in its pill form (pills, lollipops) or in its crystalline or powder form (M, crystal)	Ecstasy or other synthetic drugs (pastis, pirulas, cristal, MDMA)
Methamphetamine	Methamphetamine (bathtub, crystal meth, T)	Methamphetamine (meth, ice, crystal)
Ketamine	Ketamine (K, keta, kei)	Ketamine (also called K, Ketolar, Special K, vitamin K, k-powder)
GHB/GBL	GHB/GBL (G, canister, liquid ecstasy)	GHB [liquid ecstasy, gamma-hydroxybutyrate, X-liquid, gamma-OH]
Volatile inhalants	Poppers	Volatile inhalants (glue, glue, solvent, poppers, nitrites, gasoline)
Mephedrone	Mephedrone (mefe) or other different synthetic stimulants (bath salts, methoxetamine/MXE, methylone/3MMC, methylethcathinone/4MEC, fluoroamphetamine/light ecstasy/4FA)	Mephedrone (also called meow meow, 4-MMC, blue bubbles, catmef)

Some terms are slang names used in Spain.

^a MSM: Men who have sex with men.

^b GPM: General population men.

Supplementary Table S2. Adjusted prevalence ratio (aPR) of psychoactive drug use between men who have sex with men and general population men in Madrid, using different sets of adjustment covariates.

Model I ^a				
Reference period	Lifetime		Last-year	
	aPR	95%CI	aPR	95%CI
Hallucinogens	1.0	0.8-1.6	1.9	0.9-4.5
Cannabis	1.1	1.1-1.3	1.9	1.6-2.4
Cocaine	1.7	1.4-2.1	3.9	2.7-5.6
Amphetamine	3.7	2.6-5.5	9.8	4.6-21.0
Ecstasy	4.3	3.2-6.0	8.3	5.0-14.2
Methamphetamine	7.6	4.5-13.3	34.2	8.4-140.5
Ketamine	14.6	7.1-30.5	—	—
GHB/GBL	20.7	9.5-45.3	110.5	15.1-810.3
Volatile inhalants	82.4	37.4-181.6	390.7	54.6-2796.8
Mephedrone	105.0	14.4-769.3	—	—
Any drug ^d	1.6	1.5-1.7	3.2	2.7-3.7

Model II ^b				
Reference period	Lifetime		Last-year	
	aPR	95%CI	aPR	95%CI
Hallucinogens	0.9	0.6-1.4	2.0	0.8-5.1
Cannabis	1.1	1.0-1.3	1.9	1.6-2.4
Cocaine	1.4	1.2-1.8	2.9	2.0-4.4
Amphetamine	2.9	1.9-4.5	7.1	3.2-16.1
Ecstasy	3.5	2.5-5.1	6.4	3.7-11.3
Methamphetamine	5.9	3.4-10.6	21.4	5.2-88.0
Ketamine	11.1	5.1-24.1	—	—
GHB/GBL	17.0	7.4-39.2	77.8	10.5-576.8
Volatile inhalants	99.0	43.2-227.3	376.8	49.8-2854.7
Mephedrone	—	—	—	—
Any drug ^d	1.5	1.4-1.7	2.9	2.5-3.5

95% CI: Confidence Interval at 95%.

^a The results come from Poisson regression models with robust variance. Results were adjusted for age group, area of birth, size of place of residence and education level.

^b The results come from Poisson regression models with robust variance. Results were adjusted for age group, area of birth, size of place of residence, education level, employment status and cohabitation.

^c Only the most frequently used illicit psychoactive substances have been included. For this reason, alcohol, tobacco, tranquilizers /sleeping pills, opioids and other psychoactive drugs used in a medical or therapeutic context have not been included. Psychoactive drugs are ordered from the lowest to the highest crude prevalence ratio (See Table 2).

^d Use of any of the listed drug for any purpose.

Supplementary Table S3. Goodness-of-fit statistical information criteria comparing class membership models of poly-drug use.

Number of Classes	M L-LH	G2	AIC	CAIC	BIC	ABIC	Entropy
Lifetime drug use MSM
