Journal of the Medical Library Association

DOI: [10.5195/jmla.2019.801](https://doi.org/10.5195/jmla.2019.801)

- Starting October 1, 2019, authors of Original Investigation and Case Report manuscripts are required to deposit the de-identified data associated with their manuscripts in a repository and include a “Data Availability Statement” in their manuscripts describing where and how the data can be accessed. ...
- The *JMLA* defines “data” as the digital materials underlying the results described in the manuscript, including spreadsheets, text files, interview recordings or transcripts, images, videos, output from statistical software, or computer code or scripts.
- Shared data should be appropriately de-identified to prevent revealing the identity of study participants. MLA, the *JMLA*, and individual members of the *JMLA* editorial team are not liable for any harm or damage resulting from the insufficient de-identification of data associate with *JMLA* articles
- When possible, authors are encouraged to apply a license that is at least as permissive as a Creative Commons Attribution (CC BY) license to the data

Data deposition required for all C19 Rapid Review publishers

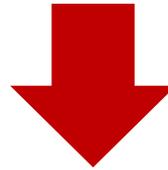

London 20 Jan 2021

Data deposition required for all C19 Rapid Review publishers

The [C19 Rapid Review Initiative](#) – a large-scale collaboration of organisations across the scholarly publishing industry – has agreed to mandate data deposition across the original group of journals that set up the collaboration (eLife, F1000 Research, Hindawi, PeerJ, PLOS, Royal Society, FAIRsharing, Outbreak Science Rapid PRereview, GigaScience, Life Science Alliance, Ubiquity Press, UCL, MIT Press, Cambridge University Press, BMC, RoRi and AfricArXiv). New members aim to align in due course.

COVID Rapid Review Initiative members **must have data shared in a public repository rather than just available on request**. The new common policy is to meet the [TOP Data Transparency Level II](#) that requires that “Data must be posted to a trusted repository. Exceptions must be identified at article submission”. This means mandating data sharing in a public repository rather than just ensuring the authors publish a Data Availability Statement (DAS). Any DAS must now explicitly list the repositories where the data are publicly available (subject to ethical considerations).

Opciones para compartir los datos de una publicación (revista). Qué, cuando, dónde

- Adjuntar los datasets como material complementario para su evaluación
- La revista crea un repositorio propio de datos para su depósito al envío del trabajo
- La revista crea un repositorio propio de datos para su depósito después de la aceptación del trabajo
- La revista integra en su workflow el depósito de datasets (p.e., con el plugin dataverse del OJS)
- **La revista recomienda el depósito en algún repositorio externo**

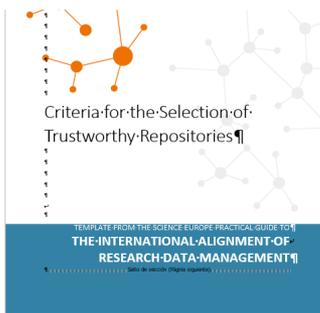

TEMPLATE FROM THE SCIENCE EUROPE PRACTICAL GUIDE TO
THE INTERNATIONAL ALIGNMENT OF
RESEARCH DATA MANAGEMENT

Criteria for the selection of repositories of data “reliable”

Offer persistent and unique identifiers (PID)

- Allow discovering and identifying the data
- Allow searching, citation and recovery of data
- Provide support for the versioning of data
- Allow finding the data
- Allow reference to relevant information related, such as other data and publications
- Provide information that is available and remains publicly, even for data not published, protected, retracted or deleted.
- Use metadata standards widely accepted (by the scientific community)
- Guarantee that the metadata are recoverable by machines.

Licencias de acceso y uso de datos

- Permitir el acceso a los datos en condiciones bien especificadas
- Garantizar la autenticidad e integridad de los datos
- Permitir la recuperación de los datos
- Proporcionar información sobre licencias y permisos (idealmente en formato legible por máquina)
- Garantizar la confidencialidad y respetar los derechos de los sujetos y creadores de los datos

Preservación

- Garantizar la persistencia de los metadatos y los datos
- Ser transparente en cuanto a la misión, el alcance, las políticas de preservación y los planes (incluyendo la gobernanza, la sostenibilidad financiera, el período de conservación y el plan de continuidad).

Dónde localizar y depositar datasets

In keeping with the open data policies of the U.S. Agency for International Development (USAID) and Bill & Melinda Gates Foundation, the Cereal Systems Initiative for South Asia (CSISA) has launched the CSISA Data Repository to ensure public accessibility to key data sets, including crop cut data- directly observed, crop yield estimates, on-station and on-farm research trial data and socioeconomic surveys. CSISA is a science-driven and impact-oriented regional initiative for increasing the productivity of cereal-based cropping systems in Bangladesh, India and Nepal, thus improving food security and farmers' livelihoods. CSISA generates data that is of value and interest to a diverse audience of researchers, policymakers and the public. CSISA's data repository is hosted on Dataverse, an open source web application developed at Harvard University to share, preserve, cite, explore and analyze research data. CSISA's repository contains rich datasets, including on-station trial data from 2009–17 about crop and resource management practices for sustainable future cereal-based cropping systems. Collection of this data occurred during the long-term, on-station research trials conducted at the Indian Council of Agricultural Research – Research Complex for the Eastern Region in Bihar, India. The data include information on agronomic management for the sustainable intensification of cropping systems, mechanization, diversification, futuristic approaches to sustainable intensification, long-term effects of conservation agriculture practices on soil health and the pest spectrum. Additional trial data in

Ejemplos del DAS (Data availability statement)

Data Availability <https://reviewer.elifesciences.org/author-guide/journal-policies>

To maintain high standards of research reproducibility, and to promote the reuse of new findings, **eLife requires all datasets associated with an article to be made freely and widely available** (unless there are strong reasons to restrict access, for example in the case of human subjects data), in the most useful formats, and according to the relevant reporting standards.

Wherever possible, **authors should make major datasets available using domain-specific public archives** (for example, [GenBank](#), [Protein Data Bank](#), and [ClinicalTrials.gov](#)), or generic databases (for example, [Dryad](#), [Dataverse](#) or [the Open Science Framework](#)) where a domain specific archive does not exist.

Authors using original data must:

- **make the data available at a trusted digital repository** (however, if all data required to reproduce the reported analyses appears in the article text, tables, and figures then it does not also need to be posted to a repository);
- **include all variables, treatment conditions, and observations described in the manuscript;**
- provide a full account of the procedures used to collect, pre-process, clean, or generate the data;
- provide research materials and description of procedures necessary to conduct an independent replication of the research.

Trusted repositories adhere to policies that make data discoverable, accessible, usable, and preserved for the long term. Trusted repositories also assign unique and persistent identifiers. Author-maintained websites are not compliant with this requirement.

[Introduction](#)[Minimal Data Set Definition](#)[Acceptable Data Sharing Methods](#)[Acceptable Data Access Restrictions](#)[Unacceptable Data Access Restrictions](#)[FAQs](#)[PLOS Data Advisory Board](#)

Data Availability

The following policy applies to all PLOS journals, unless otherwise noted.

Introduction

PLOS journals require authors to make all data necessary to replicate their study's findings publicly available without restriction at the time of publication. When specific legal or ethical restrictions prohibit public sharing of a data set, authors must indicate how others may obtain access to the data.

When submitting a manuscript, authors must provide a Data Availability Statement describing compliance with PLOS' data policy. If the article is accepted for publication, the Data Availability Statement will be published as part of the article.

Acceptable data sharing methods are listed below, accompanied by guidance for authors as to what must be included in their Data Availability Statement and how to follow [best practices in research reporting](#).

PLOS believes that sharing data fosters scientific progress. Data availability allows and facilitates:

- › Validation, replication, reanalysis, new analysis, reinterpretation or inclusion into meta-analyses;
- › Reproducibility of research;
- › Efforts to ensure data are archived, increasing the value of the investment made in funding scientific research;
- › Reduction of the burden on authors in preserving and finding old data, and managing data access requests;
- › Citation and linking of research data and their associated articles, enhancing visibility and ensuring recognition for authors, data producers and curators.

Publication is conditional on compliance with this policy. If restrictions on access to data come to light after publication, we reserve the right to post a Correction, an Editorial Expression of Concern, contact the authors' institutions and funders, or, in extreme cases, retract the publication.

Neuropsychology (<https://www.apa.org/pubs/journals/neu/index?tab=4>)

Data, Materials, and Code

Authors must state whether data and study materials are available and, if so, where to access them. Recommended repositories include [APA's repository](#) on the Open Science Framework (OSF), or authors can access a full [list of other recommended repositories](#).

In both the Author Note and at the end of the Method section, specify whether and where the data and material will be available or note the legal or ethical reasons for not doing so. For submissions with quantitative or simulation analytic methods, state whether the study analysis code is available, and, if so, where to access it (or the legal or ethical reason why it is not available).

Journal of Animal ecology <https://besjournals.onlinelibrary.wiley.com/hub/journal/13652656/author-guidelines>

Data Availability Statement

To enable readers to locate archived data from papers, we require that authors list the database and the respective accession numbers or DOIs for all data from the manuscript that has been made publicly available. For example, “Data available from the Dryad Digital Repository <http://dx.doi.org/10.5061/dryad.41qh7> (Kiere & Drummond 2016).” When a DOI is available for the data, the full data citation should also be given in the reference list.

Statement examples by research area. Life sciences and clinical medicine.

<https://www.springernature.com/gp/authors/research-data-policy/data-availability-statements>

Data publicly available in a repository:

- PRO-Seq data were deposited into the Gene Expression Omnibus database under accession number GSE85337 and are available at the following URL:

<https://www.ncbi.nlm.nih.gov/geo/query/acc.cgi?acc=GSE85337>.

- The experimental data and the simulation results that support the findings of this study are available in Figshare with the identifier <https://doi.org/10.6084/m9.figshare.13322975>. The anonymised data collected are available as open data via the University of Bristol online data repository:

<https://doi.org/10.5523/bris.1dnhjcw6w4m1n29u2yuxjywde1>.

Data available with the paper or supplementary information:

- All data supporting the findings of this study are available within the paper and its Supplementary Information. Microsatellite primer sequences are provided in Supplementary Table 2, along with original reference describing the microsatellites used in this study. All data on the measured ecosystem variables indicating ecosystem functions that support the findings of this study are included within this paper and its Supplementary Information files.

•Data cannot be shared openly but are available on request from authors:

- The data that support the findings of this study are not openly available due to reasons of sensitivity and are available from the corresponding author upon reasonable request. Data are located in controlled access data storage at Karolinska Institutet

- The data that support the findings of this study are available from the authors but restrictions apply to the availability of these data, which were used under license from the Natural History Museum (London) for the current study, and so are not publicly available. Data are, however, available from the authors upon reasonable request and with permission from the Centre for Human Evolution Studies at the Natural History Museum.

Cómo citar ficheros de datos

Por qué y cómo citar los datos (para autores)

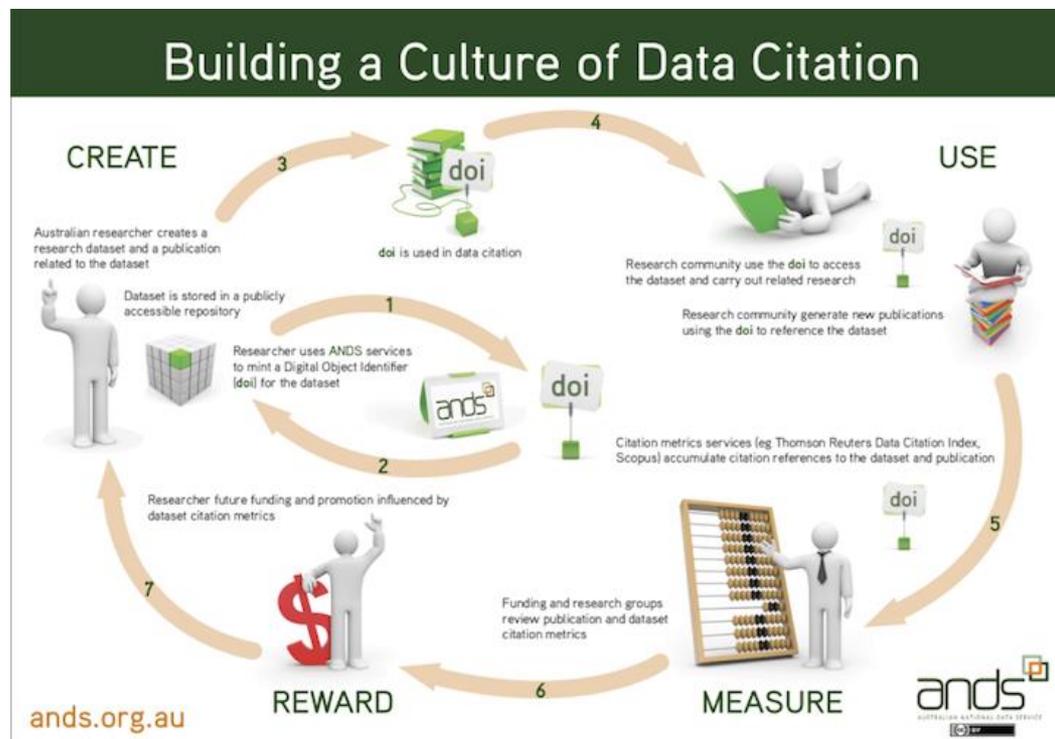

¿Por qué?

1. Facilita la reproducibilidad y la validación de los resultados, permite la reutilización de los datos.
2. Proporciona crédito a los generadores de datos.
3. Las publicaciones vinculadas a datos disponibles públicamente se han asociado a un aumento de las citas.
4. Mejora la conectividad y el seguimiento de la procedencia de los datos descritos en las publicaciones.
5. Las agencias de financiación (ej Comisión Europea), los editores (Plos) y las instituciones (p.e. CSIC) exigen cada vez más que se compartan los datos.

¿Cómo?

1. En el caso de los datos primarios: determine un repositorio apropiado a largo plazo para archivar los datos. Su editor debe proporcionar acceso a una lista de repositorios de archivo aceptables.
2. Deposite sus datos y obtenga del repositorio un número de acceso o un DOI del conjunto de datos.
3. Para los datos secundarios: cite lo que utiliza. Cuando utilice los datos de otros, cite tanto la literatura revisada por pares como los conjuntos de datos utilizados
4. Incluya citas de datos "formales" siempre que sea posible: Cuando los conjuntos de datos tienen identificadores formales y estables o números de acceso, deben incluirse en la lista de referencias principal.
5. Sea lo más completo posible, pero no se invente los metadatos: Si un registro de datos no tiene un autor/creador o un título claros, no se invente uno.
6. Consulte la Guía para autores de su editor para dar formato a la referencia de su conjunto de datos.

Cousijn, H., Kenall, A., Ganley, E. *et al.* A data citation roadmap for scientific publishers. *Sci Data* **5**, 180259 (2018). <https://doi.org/10.1038/sdata.2018.259>

También si no tienes DOI

A standard citation includes the following elements:

Autores (año): Título. Lugar de publicación. DOI (if used)

Ejemplo

Hanigan, Ivan (2012): Monthly drought data for Australia 1890-2008 using the Hutchinson Drought Index. The Australian National University Australian Data Archive.

¿Cómo buscar si un artículo tiene material suplementario?

En PMC existen filtros para localizar artículos con diversos tipos de datos asociados:

«**has suppdata[filter]**» para buscar artículos con material complementario asociado.

«**has data avail[filter]**» para buscar artículos que incluyen una disponibilidad de datos o una declaración de accesibilidad de datos.

«**has data citations[filter]**» para buscar artículos que incluyan citas de datos.

«**has associated data[filter]**» para encontrar todos los artículos con cualquier tipo de sección de datos descrita anteriormente.

<https://bibliogetafe.com/2018/12/21/como-buscar-si-un-articulo-tiene-material-suplementario/>

has suppdata[filter]»

ABSTRACT

[Go to:](#) ►

Hepatitis A represents one of the major public health problems worldwide including India. Vaccination is the most effective way to prevent hepatitis A infection. Two types of hepatitis A vaccines-live attenuated (H2 strain) and inactivated (killed) are available for use in clinical practice in India with former having advantage of a single-dose compared to two-dose killed vaccine. One of the important characteristic of an ideal vaccine includes its ability to provide life-long protection. In
