

Supplementary Figure 6. Analysis of PSRYD7 interacting proteins. (A) Coomassie blue staining and western blot of cell protein extracts from KM12C and KM12SM confirmed the high quality of the protein samples for the immunoprecipitation assay. (B) Silver staining after PAGE-SDS of IP elutes demonstrate the isolation of potential SPRYD7 interacting proteins after immunoprecipitation. (C) Protein enrichment with DAVID database of potential SPRYD7 interactors revealed the processes in which these proteins are involved and that might be regulated by SPRYD7 in CRC.
