

Supplementary File S1. Descriptive analysis of QoL and OB scores.

Table S1. Descriptive analysis of QoL and OB scores for the total sample before and after the pandemic.

	COVID-19 diagnosis (n=61)	No COVID-19 diagnosis (n =57)	Total sample (n=118)
	M±SD	M±SD	M±SD
EuroQoL 5D-5L <i>Before pandemic</i>	0.73±0.294	0.86±0.175	0.91±.248
<i>1 year after confinement</i>	0.65±0.281	0.81± 0.176	0.79±.246
OBQ <i>Before pandemic</i>	43.98±10.706	45.28±9.168	43.75±9.98
<i>1 year after confinement</i>	29.60±13.913	34.94±13.581	32.38±13.86

Supplementary File S2. Multicollinearity test

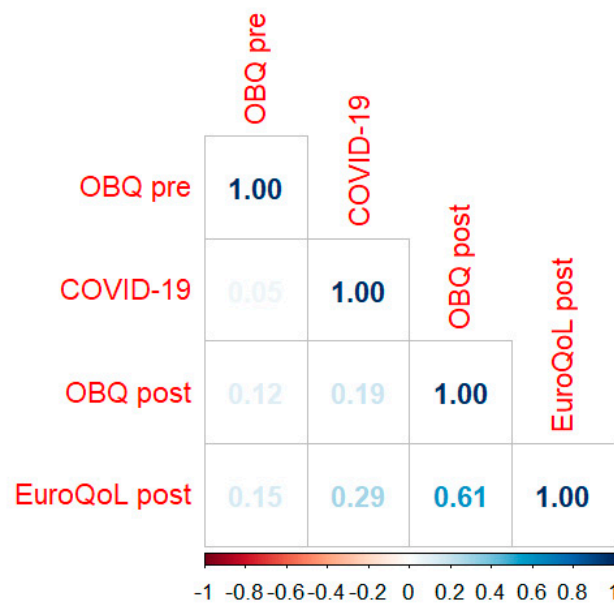

Figure S1. Correlations between variables introduced in the regression model.

Table S2. Multicollinearity test based on the regression model.

Covid19 diagnosis	OBQ pre	OBQ post
1.037783	1.015277	1.050118
