

Suppl Fig 1. Plasma biomarkers in non-MTB-infected and MTB-infected children. Box-whisker plots show cytokine concentration or ratios in children without MTB infection and in children with MTB infection (comprising the following groups: latent TB infection, probable TB, confirmed TB). The cytokine concentration cut-off of the assays for IFN- γ , MCP-1, and IL-2 is depicted in blue. Statistical significance was tested using the Mann-Whitney test. $P < 0.05$ was considered statistically significant; all statistically significant comparisons are shown. Abbreviations: MTB, *M. tuberculosis*.
