EJEMPLO: ELSEVIER SHARING POLICIES

Accepted Manuscript

Authors can share their accepted manuscript:

Immediately

- via their non-commercial personal homepage or blog
- by updating a preprint in arXiv or RePEc with the accepted manuscript
- via their research institute or institutional repository for internal institutional uses or as part of an invitation-only research collaboration work-group
- directly by providing copies to their students or to research collaborators for their personal use
- for private scholarly sharing as part of an invitation-only work group on commercial sites with which Elsevier has an agreement

After the embargo period

- via non-commercial hosting platforms such as their institutional repository
- via commercial sites with which Elsevier has an agreement

In all cases accepted manuscripts should:

- link to the formal publication via its DOI
- bear a CC-BY-NC-ND license – this is easy to do, [click here](#) to find out how
- if aggregated with other manuscripts, for example in a repository or other site, be shared in alignment with our [hosting policy](#)
- not be added to or enhanced in any way to appear more like, or to substitute for, the published journal article

Excepciones en las que sería posible cumplir con la obligación, al permitir la publicación inmediata

Periodos de embargo superiores a los permitidos por la CE (12/24 meses en la mayoría de las revistas de Elsevier)

Opciones:

1. Negociar con el editor las condiciones de autoarchivo, antes de la publicación.
2. Negociar con el *project officer* una exención del mandato.
3. Pagar APCs – vía dorada: costes variables (dependiendo del área 1500-2000 €). Los costes son elegibles pero deben ser tenidos en cuenta en el presupuesto.
4. Vías alternativas.

UKRI [»](#), Wellcome Trust [»](#) and partners of the [Charity Open Access Fund](#) [»](#) all require journal articles that result from their funded research to be made open access. The [Higher Education Funding Bodies of the UK](#) [»](#) also require that journal articles meet accessibility requirements in order to be eligible for submission to the [Research Excellence Framework \(REF\)](#) [»](#).

[Read more about open access options for UK researchers +](#)

United States

Following the memorandum from The White House Office of Science and Technology Policy (OSTP) each Federal Agency is directed to develop plans to make the published results of federally funded research freely available to the public within one year of publication and requiring researchers to better account for and manage the digital data resulting from federally funded scientific research. In some cases, Agencies have already had long established public access policies such as the NIH, however most Agencies have or will announce new policies. These policies will affect how US researchers need to publish their results. To comply with US public access policies, we have outlined the open access options available to US researchers below.

asked Jun 1 '18 at 19:32

Geremia

1,754 🏆3 📄16 📚29

@TheGuy Yes, I've assigned them to my own preprints. See: [ResearchGate DOIs](#). Try adding a preprint [here](#); it should let you assign a DOI. – Geremia Jun 1 '18 at 20:02 ✎

Why do you want a DOI on sth. that is not 100% final? They are unique and permanent, so you're supposed to keep the target available in perpetuity. – Karl Jun 1 '18 at 20:31

@Karl [According to ResearchGate](#), "DOIs help you: • Make your research citable. • Put a date on your discovery." Also, RG's "DOIs can be generated for most of your unpublished work." – Geremia Jun 1 '18 at 21:01 ✎

5 So is this question an ad for research gate or...? – user9646 Jun 2 '18 at 4:48

1 I suggest editing the question to essentially "where to obtain a DOI for a preprint for free?" – Oleg Lobachev Jun 2 '18 at 15:30

[SEE WHO THEY ARE AND CONTACT THEM →](#)

The screenshot shows the 'RESEARCH & INNOVATION Participant Portal H2020 Online Manual'. The header includes the European Commission logo and navigation icons. A left sidebar contains a search bar and a tree menu with categories like 'H2020 Online Manual', 'My Area - User account & roles', 'Grants', and 'Applying for funding'. The main content area shows a breadcrumb trail: '> H2020 Online Manual > Cross-cutting issues > Open access & Data management >'. Below this are two buttons: 'Open access' and 'Data management'. The section title is 'Open access & Data management'. The text states: 'These pages guide you through' followed by a list:

- the context and Horizon 2020 rules on **open access to scientific publications**, which is an *obligation*, and
- **open access to research data**, where opt-outs are possible, and **research data management**

 It then says: 'Detailed guidance for both aspects is available through the buttons on top of the page and the pdf reference documents bellow.' A sub-section titled 'What Is Open Access (OA)?' defines it as 'providing on-line access to scientific information that is free of charge to the reader' and lists:

- **Peer-reviewed scientific research articles** (primarily published in academic journals)
- **Research data**

 It concludes with: 'More details about Horizon 2020 provisions for open access to publications and data is given below.' and a section header 'OPEN ACCESS TO PUBLICATIONS'.

Assistance with Article Processing Charges (APC)

A number of funding options are available to authors

Research4Life initiative

Corresponding authors based in countries classified by Research4Life as 'Group A' and 'Group B' countries are eligible for a full APC waiver. Corresponding authors based in other countries, or who lack research funding or open access funds to draw upon, may apply for a discretionary waiver.

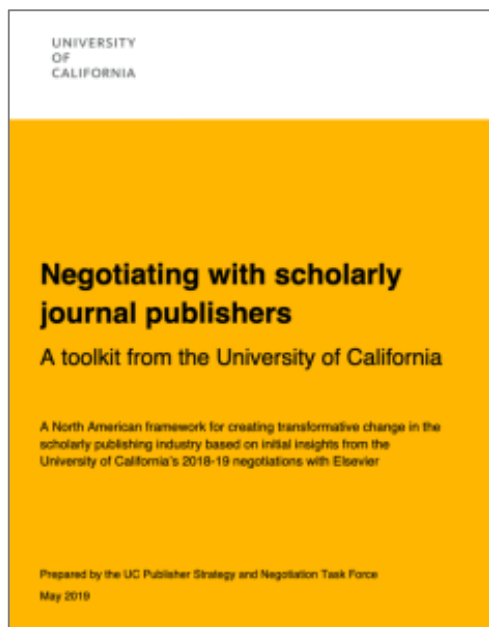

Open Access Membership

The Royal Society Open Access Membership programmes actively encourage open access in scholarly communication. Discounts of up to 25% are offered on each article processing charge. Prepay Membership enables an organisation to cover open access article processing charges incurred by its researchers upfront.

Discretionary waivers

We will consider waiving the APC in cases where authors lack funds and are not eligible for other means of funding support. Editors are not made aware when a waiver has been granted and requests are independent of the peer review process.

Negotiating with scholarly journal publishers : A toolkit from the University of California.

Open access agreement for Austrian authors

Members of the Austrian Academic Library Consortium and the Austrian Science Fund established an agreement with Springer which includes access to more than 2,000 of Springer's subscription journals as well as allowing authors to publish open access in subscription journals.

The Open Access agreement covers the open access charge for affiliated corresponding authors in those subscription-based journals that are offering the hybrid open access option Open Choice.

Which institutes and Springer journals are covered by the OA agreement?

[Click here](#) for a list of all Austrian institutes covered by the Open Access agreement.

[Click here](#) for a list of Open Choice eligible subscription-based journals covered by the Open Access agreement with KEMÖ.

How can I (being the corresponding author) identify myself as affiliated with a participating Austrian institute?

Once your article is accepted, Springer will send you a link to the [MyPublication](#) form. There you will be asked to state your affiliation. Then you will be asked to agree to the open access terms. During the production process, Springer and your institution will verify your eligibility. When publishing your article under this agreement, please ensure that your institute is shown in the PDF. Please note that color in print charges are not covered by this agreement.

As the corresponding author, you are advised to use your institutional email address instead of your private email address. This enables Springer to better identify you as eligible under this agreement.

If you have any questions about the verification process, or if you would like to check your eligibility, please [click here](#).

DEPOSIT ACCOUNT

Provides greater flexibility and reduced per-article administration costs

Deposit Accounts allow institutions to budget APC expenditures for a fiscal year. The institution deposits funds into an account with PLOS to facilitate APC payment throughout the year. Corresponding authors affiliated with the institution are eligible; contributing authors are not.

How it works:

- **Initial deposit:** The institution determines the amount to be deposited into their APC account (subject to a minimum threshold) based on historical authoring data supplied by PLOS. PLOS can prorate estimates to correspond to an institution's fiscal year/budget cycle.
- **Account debited for accepted manuscripts:** The deposit account is not debited until the manuscript of a corresponding author who is a member of the institution is accepted by a PLOS journal.
- **Monthly statements:** Regular reports are provided for institutions to track and manage APC expenditures. A monthly statement details each corresponding author's manuscript that has been accepted for publication.
- **Low balance alert:** When the Deposit Account balance falls to 25% of the initial total, a low-balance alert and replenishment invoice will be sent to the institution as part of the monthly billing process. At the end of the year, any residual balances of prepaid deposits within the fiscal year will be applied toward the balance of the next fiscal year.
- **Exiting the Deposit Account:** Institutions choosing not to add additional money to a Deposit Account have the option to:
 - Convert to Direct Billing, or
 - Exit the Deposit Account program entirely. Participating institutions can exit the Deposit Account arrangement with a 90 days advance notice, per contract agreements. Any unused deposits will be refunded promptly to institutions, with clear accounting after 45 days to allow for final settlement.

Direct2AAM: Helping Authors Find Author Accepted Manuscripts

To make it easier for authors to self-archive simply, quickly, and correctly, we've created Direct2AAM, a set of guides to turn the often unsuccessful hunt for author accepted manuscripts (AAM) into a simple set of instructions that'll always bring results. The guides, available for most major journals, provide easy to follow instructions for authors to obtain an Author Accepted Manuscript from their journal submission system, where the AAM is stored during the publishing process.
